

ABSTRACT OF THE DISCLOSURE

A translating apparatus includes translating means for translating document data into another language, an output unit for outputting the translated document data translated by the translating means, a mode setting unit for setting in a first mode or a second mode, and a controller. In a case where the first mode is set, the controller controls the translating means so as to translate the document data into a plurality of languages, and controls the output unit so as to output the translated document data by each language group. In a case where the second mode is set, the controller controls the translating means so as to translate the document data into a plurality of languages, and controls the output unit so as to output the translated document data by group including each translated language document data.
